OARS Items of Interest for the Week Ending July 21, 2017

Extramural Management

- ORD is currently in the process of negotiating changes to the list of procurements included in OAM's priority list for processing by September 30, 2017 based upon discussions held with each LCO POS lead. A final list of all ORD priority actions will be delivered to the Management and Operations Council members after negotiations are complete. Should any emergencies arise which require processing of a new procurement action between now and the end of fiscal year 2017, the requests should be coordinated through ORD's acquisition champions, Yvonne Murphy and William Goins.

- The OARS FTTA team and OGC are currently working on a CRADA to assess atmospheric water generation technologies. The CRADA effort was prompted by interest from the Administrator's Office after a discussion with WaterGen, an Israeli company with a patented "water from atmosphere" technology. ORD, in close collaboration with FTTA and OGC, is also preparing to advertise for other companies to enter in the atmospheric technology assessment effort with WaterGen. Separate CRADAs will be developed with companies responding successfully to EPA's advertisement. Questions may be directed to Patricia Palmer and Sarah Bauer.
